*This is on top of any product or adviser charge you pay and includes a fixed management fee plus expenses that vary with the day to day costs of running the fund. The fund charges may differ for Retiready (RR) or Aegon One Retirement (AOR).

About fund performance

Investors should always consider performance in relation to the objective of the fund and over periods of at least five years. If a fund has risen in value, it doesn't mean it is meeting its objective – especially if the fund is aiming to outperform a particular benchmark or meet a risk target. The same applies if the fund has fallen in value.

Our risk rating

Risk level 3 investors take a balanced view of risk and are prepared to take risks with their savings in the hope that long-term returns will outstrip and short-term losses

Fund objective

This fund aims to make saving for a pension simple. It aims to grow investors' savings by investing around 30% in a mix of less risky assets, like bonds and property, with around 70% invested in riskier assets, such as equities (shares) including some in emerging markets equities. It also has an added safeguard that moves some money out of riskier investments into safer ones when things get too risky. We believe this will help limit the impact on your investment of extreme and prolonged market falls. But, there's also a chance it may limit returns if markets bounce back quickly. There's no guarantee the fund will meet its objective. Its value can go down as well as up and you may get back less than you invested. Retiready Solution 3 is an Aegon insured fund which invests in the BlackRock Volatility Strategy II fund.

Fund performance

The following graph and tables show the performance of the fund over various time periods compared to the fund's benchmark (if there is one). All performance information is as at 30 Sep 2023 unless otherwise stated.

In the graph, performance is shown since launch if the fund is less than five years old.

■ Aegon Retiready Solution 3 (RR)

	1yr	3yrs	5yrs	10yrs
Fund	7.7%	3.1%	2.0%	-
	Sep 22 to Sep 23	Sep 21 to Sep 22	Sep 20 to Sep 21	Sep 19 to Sep 20
Fund	7.7%	-12.0%	15.5%	-5.1%

Fund manager information

This fund is an Aegon Solution. This means it is a pre-built fund Aegon have created to offer whole investment strategies in a single fund with the aim of making investing easier. We reserve the right to add, remove and replace the underlying funds within this solution with the aim of making sure the fund continues to meet its aims and objectives. Sometimes we work with external fund managers and they select and manage the underlying funds on our behalf. The additional charges/expenses may change when underlying funds are replaced, added or removed from the portfolio or when weightings between the underlying funds are changed. Please note, there's no guarantee the fund will meet its objective.

Risks specific to this fund

There is no guarantee the fund will meet its objective. The value of an investment can fall as well as rise and investors could get back less than they originally invested. All funds carry a level of risk and the information below outlines the key risks for this fund.

Currency risk - this fund invests overseas so its value will go up and down in line with changes in currency exchange rates. This could be good for the fund or bad, particularly if exchange rates are volatile.

Third party risk - in the event that the underlying investments which the fund invests in suspend trading, Aegon may defer trading and/or payment to investors. The value ultimately payable will depend on the amount Aegon receives or expects to receive from the underlying investments.

Credit risk - this fund invests in bonds or other types of debt. Bonds are essentially loans to companies, governments or local authorities so there's a risk that these companies or government bodies may default on the loan. Bonds are rated in terms of quality, usually from AAA down to B and below. AAA is the highest quality and therefore the least likely to default and B or lower the most likely to default. Where we have it we show the credit quality of the loans held by this fund.

Derivative risk - this fund will use derivatives in a number of ways to achieve its objectives. Holdings may add up to over 100% because derivatives offer a way to gain exposure to the returns of a specified equity or bond market without having to directly own it. These negative figures are not shown within the top holdings section. Derivatives allow a manager to buy or sell an investment at a specified future date for a specified price. However, this means the fund could be exposed to additional risks if the market moves up when the manager expected it to go down or vice versa.

Interest rate risk - interest rate changes could affect the value of bond investments. Where long term interest rates rise, the value of bonds is likely to fall, and vice versa.

Risk management risk - the fund's risk management process may mean it misses out on potential growth, particularly if markets bounce back quickly after a fall, or if it de-risks when markets are still growing. The added safeguard doesn't mean this fund won't fall in value.

Target risk - the fund may sit outside its risk target at times, for example if risk in the markets is unusually high or low. The risk target is long term, so the manager wouldn't increase or decrease the fund's risk just to meet its risk target in the short term.

De-risking risk - BlackRock may choose to use its discretion to de-risk by amounts other than those stated.
